Product Code
500 Grams: FK-DAB500

Features & Benefits

Ready-to-use: Simple, easy application Notice the difference after one treatment!
Controls dishwasher and kettle scaling **Powerful:** Less maintenance means more economy

Da Bomb keeps hard water limescale in auto dishwashers under control. Use monthly as part of your machine manufacturer's maintenance cleaning program to keep scale at bay! Can also be used for the removal and build-up of calcium, rust and lime and as a cleaner for electric jugs.

DIRECTIONS Read all instructions carefully when using this product for the first time.

Auto Dishwasher Descaling:

Chemical dosing must be temporarily disabled before use.

This can be achieved by either:

1. Carefully removing the chemical dosing uptake tubes from containers, (Always wear gloves and safety glasses) and running the machine for 5 cycles to allow the majority of product to be dosed from lines to machine, then leave lines out of product throughout the procedure. OR 2. Turning the machine detergent and rinse pump (if filtered) off. OR 3. Temporarily taking the squeeze tubes from the roller mechanism in the pumps. **To use:** Dissolve the entire 500gm pack of Da Bomb powder contents in the main wash tank with fresh cycle water, and allow the diluted solution to be heated as for a normal cleaning cycle. Run machine for 7-8 cycles (preferably on the longest cycle). Scale will soften with each successive cycle and can be loosened with a stiff brush to further assist scale removal speed. More cycles or a repeat application may be required for heavy scale buildup. Recommended as a monthly maintenance treatment to control machine scaling.

Electric Kettle/Jug Cleaning:

1. Ensure any obvious, significant scale is first removed with a damp cloth, then fill your electric kettle/jug with water.
2. Leaving the lid open, add two heaped teaspoons of Da Bomb.
3. Bring to boil (repeat if necessary) then leave to cool for 15-20 mins, then discard solution and thoroughly rinse. Repeat steps if required.
4. Fill with fresh water and bring to boil once more, empty kettle and rinse - Then you are good to go for regular use!
Extreme buildup may require a secondary treatment. Can be used on both metal and plastic jugs. We recommend using every 6 months in areas with hardwater to keep the electric jug looking like new.
